Description

Description

As a CRM user, I want to create, assign, and manage tasks and follow-ups, So that I can plan and track work and have it captured against the relevant record.

Dependencies

- User management for assigning tasks to users (Assign To)
- Workflow/automation engine for rule-based task automation and overdue escalation
- Notification service for reminders and assignee notifications

Pre-conditions

- User has permission to create and manage tasks for the active entity/tenant
- Tasks module is enabled for the tenant
- Assignable users and associable objects exist in the system

Acceptance Criteria

AC1: Task workspace and tabs

Given the user is on the Tasks module, When the workspace loads, Then the system:

Provides the tabs My Task and My Team's Task to switch the list scope

Shows a "+ Add Task" action and a kebab for workspace-level actions

Displays an informational/automation banner that can be dismissed

AC2: Insights panel

Given the Tasks workspace, When the Insights panel renders, Then the system:

Displays Total Task, Pending Task, In-progress Task, Overdue Task, and Completed Task metrics reflecting current data

Provides help tooltips on each metric

Allows the panel to be locked, configured (settings), and collapsed/expanded

AC3: Filters and search

Given task records exist, When the user works with the filter bar, Then the system:

Provides an Activity Type filter and a Status filter, plus an add-filter  control

Returns matching records on search; combines active filters with AND logic

Resets filters when the user clicks Clear All

AC4: Task list cards (expand / collapse)

Given tasks exist in scope, When the list renders, Then each task card shows the summary, and When expanded, reveals the full detail:

Activity type and title (e.g., "Follow-up: ..." or "Task: ...") with priority and tags

Description with a "Show more" expander

Assigned to and Scheduled on

Associations (e.g., Deal name 1, a user), with an add control

Status dropdown, Reminder, Add follow up, attachments, and comments

Created by and Created on metadata

AC5: Open Add Task popup

Given the user clicks "+ Add Task", When the popup opens, Then the system displays the Add Task controls:

Task Name (mandatory) and Assign To (mandatory)

Date & Time, Priority, Reminder, and Tags

Description (mandatory) with a rich-text editor (image, link, bold, italic, divider, list, attachment)

Associations , Clear fields, minimize, expand, close, Cancel, and Save

AC6: Create a task and validation

Given the Add Task popup, When the user attempts to Save, Then the system:

Saves the task and adds it to the list when all mandatory fields (Task Name, Assign To, Description) are completed

Blocks the save and shows inline validation when a mandatory field is missing or the date/time is invalid

AC7: Assign To

Given the Assign To field, When the user opens it, Then the system:

Displays a searchable user list

Allows selecting one or more users, shown as removable chips (e.g., John x, Jane x)

Assigns the task to the selected user(s)

AC8: Date & Time, Priority, Reminder, and Tags

Given the Add/Edit Task popup, When the user sets the secondary fields, Then the system:

Captures Date & Time (e.g., 12 Mar 2026 - 10:00 AM)

Applies the selected Priority (e.g., Medium) and Tags (selectable/removable chips)

Sets a Reminder lead time (e.g., 1 hour before / 30 mins before)

AC9: Description editor with mentions

Given the Description editor, When the user composes the description, Then the system:

Retains rich-text formatting (bold, italic, list, link, divider) and image/file attachments on save

Supports @mentions of users (e.g., "Hi @Juliana Swift")

AC10: Associations

Given the Associations control, When the user adds an association, Then the system:

Provides an Objects selector (e.g., Deals) with search

Allows linking the task to records (and users), shown as association chips

Persists the associations on save

AC11: Edit a task

Given an existing task, When the user opens Edit Task, Then the system:

Opens the task pre-filled with its current values (Task Name, Assign To, Date & Time, Priority, Reminder, Tags, Description, Associations)

Saves the changes on Save and reflects them on the task card

AC12: Task actions (kebab menu)

Given a task card, When the user opens its kebab menu, Then the system offers:

Edit - opens the Edit Task popup

Duplicate - creates a copy of the task

Mark as completed - sets the task status to completed

Delete - removes the task after confirmation

AC13: Status management

Given a task, When the user opens its Status dropdown, Then the system:

Allows updating the status (e.g., Upcoming, In-progress, Completed, Overdue per the configured set)

Reflects the change on the card and in the Insights metrics and filters

AC14: Reminders

Given a task with a reminder, When the reminder lead time is reached, Then the system notifies the assignee per notification settings; and the reminder lead time is editable from the card.

AC15: Add Follow-up

Given a task, When the user selects Add follow up, Then the system opens an Add Follow-up popup capturing Date, Time, and Description; and on Add, attaches the follow-up to the task and persists it.

AC16: Comments

Given a task, When the user works with comments, Then the system:

Provides an Add comment box with a Comment action

Shows a "No comments yet" empty state until the first comment is added

Lists comments with author and timestamp, and a sort control (Most recent / Oldest)

Updates the comment count/badge on the task card

AC17: Attachments

Given a task, When the user attaches a file, Then the system saves the attachment and makes it accessible from the task card.

AC18: Automation, notifications, and escalation

Given workflow rules are configured, When applicable, Then the system:

Automates tasks based on workflow rules

Triggers notifications to assignees on priority and status changes

Escalates overdue tasks automatically

AC19: Cross-object logging

Given a task associated with a record, When the related contact/deal/lead is viewed, Then the task appears in its activity history; and Given a record detail page, When the user creates a task from it, Then the task is pre-associated to that record.
