Summary	A broker admin can decide who enrols in an incentive program using rules on CRM objects and their fields.

Why

The problem: Enrolment is decided only by fixed criteria: Country, Account Type, Account Status and Manual Enrollment.

Who asked:

What it costs today:

What good looks like: With FYNXT Cloud and the incentive program integrated, an admin can filter enrolment using objects and fields from the CRM.

Who is involved

Actor	Their part in this feature
Broker admin	Sets the enrolment rules on a program
CRM	Supplies objects, fields, values and participant records
Participant (client or IB)	Enrols only if they match the rules

User stories

US1 - Filter enrolment by CRM objects and fields (Must)

As a broker admin, I want to set enrolment rules on CRM objects and their fields, so that only matching participants enrol.

Independent test: With one rule, a matching participant enrols and a non-matching one does not.

Acceptance scenarios:

1. Given the rule Account › Country is United Kingdom, when a participant from the United Kingdom enrols, then they are enrolled.
2. Given the same rule, when a participant from Germany tries to enrol, then they are not enrolled.

US2 - Combine rules and groups (Must)

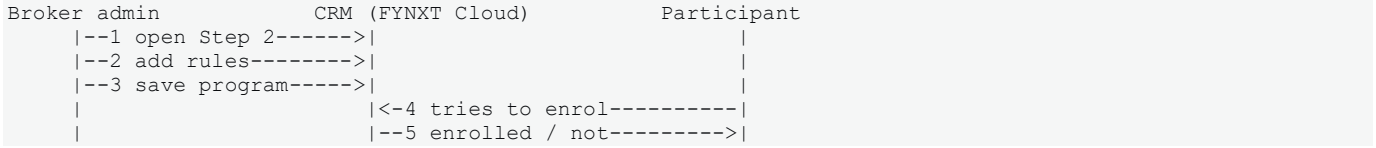

As a broker admin, I want to combine rules with All or Any, and group rules with their own All or Any, so that I can express conditions like A and B and (C or D).

Independent test: E1 and E2.

Acceptance scenarios:

1. Given the setup in Examples, when a participant matches R1, R2 and R4, then they are enrolled.
2. Given the same setup, when a participant matches R1 and R2 only, then they are not enrolled.

User journey

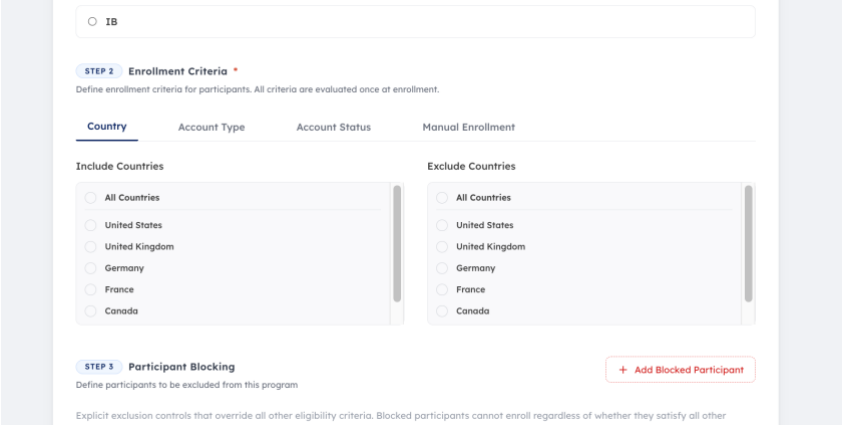

1. [UI] Broker admin opens Step 2 Enrollment Criteria in the program wizard (S1).
2. [UI] Adds rules (Object, Field, Condition, Value), groups them if needed, and sets All or Any.
3. [UI] Saves the program.
4. [Backend] A participant tries to enrol; their CRM record is checked against the rules.
5. [Backend] The participant is enrolled only if the rules are met.

Screens

ID	Screen	Figma frame link	Purpose	States to design
S1	Incentive Program wizard: Step 2 Enrollment Criteria	Wireframe Option B (design link above)	Set enrolment rules	Empty, filled

S1 today: Step 2 Enrollment Criteria

Rules

Front end

U1. In Step 2, the admin can add rules on CRM objects and their fields.
U2. A rule is Object, Field, Condition and Value. Only the chosen object's fields are offered; conditions and values depend on the field.
U3. The admin sets whether participants must match All or Any of the top-level rules and groups.
U4. The admin can group rules. Each group has its own All or Any, which applies only to the rules inside that group.
U5. A group holds rules only, not other groups.
U6. The admin can add and delete rules and groups, and clear all rules.

Back end

B1. Objects, fields and values come from the CRM.
B2. A participant enrols only if their CRM record meets the rules.
B3. The rules are checked once at enrolment, like the other criteria.
B4. Participant Blocking overrides all eligibility criteria, these rules included.

Examples

Setup: top level All. R1 Account › Country is United Kingdom. R2 Account › Account Status is Active. Group 1 (Any): R3 Account › Account Type is VIP; R4 Trading Account › Balance is greater than 1,000.

#	Rule	Input	Expected result
E1	U3, U4, B2	United Kingdom, Active, Standard, balance 2,500	Enrolled (Group 1 met by R4)
E2	U4, B2	United Kingdom, Active, Standard, balance 500	Not enrolled (Group 1 not met)
E3	U3, B2	Germany, Active, VIP	Not enrolled (R1 not met)
E4	U3, B2	Top level changed to Any. Germany, Active, Standard, balance 500	Enrolled (R2 met)
E5	B4	Participant from E1 who is in Participant Blocking	Not enrolled

Edge cases and errors

Case	Side	Expected result
Participant's CRM field used in a rule is empty	Backend	
A CRM field used in a rule is renamed or deleted	Backend	

What must not change

- Country, Account Type, Account Status and Manual Enrollment can still be set.
- Participant Blocking overrides all eligibility criteria.
- All criteria are checked once at enrolment.

Out of scope

- Re-checking participants after they have enrolled.
- Groups inside groups.

Data and interfaces

Field	Screen	Direction	Type	Required	Allowed values and rules	Example
Object	S1	In	List	Yes, per rule	From the CRM	Account
Field	S1	In	List	Yes, per rule	The chosen object's fields, from the CRM	Country
Condition	S1	In	List	Yes, per rule	Depends on the field type	Is
Value	S1	In	Depends on field	Yes, per rule	From the CRM where a list exists	United Kingdom
Top-level match	S1	In	List	Yes	All, Any	All
Group match	S1	In	List	Yes, per group	All, Any	Any

System	Direction	Change	Owner agreed?
CRM	In	Objects, fields, values; participant records at enrolment	

Definition of done

- ☐ Screen S1 matches its design, in every listed state
- ☐ Rules U1-U6 and B1-B4 are met
- ☐ Every question in Open questions and decisions has an answer
- ☐ Every acceptance scenario, example and edge case passes as an automated test
- ☐ Everything under What must not change still passes
- ☐ Product has signed off

Open questions and decisions

Question	Owner	Answer
How do top-level and group All / Any relate?	Product	Top level combines the rules and groups; a group's setting applies only inside that group
Can a group contain another group?	Product	No
When are the rules checked?	Product	Once at enrolment

Changes after Ready for build

None

Glossary

Term	Meaning
Object	A record type in the CRM, e.g. Account, Contact
Field	One attribute of an object, e.g. Country
Rule	Object, Field, Condition and Value
Group	A set of rules with its own All or Any
