Summary	A Rebates program can also pay PAMM rebates: a share of a mapped strategy's Performance Fee and per-lot rebates on investors' virtual accounts, split by the referring IB's tier scheme. The Incentive program works out the split and sends it back to the CRM instantly; CRM and PAMM pay it.

Why

The problem: There is no Performance Fee split and no PAMM rebate today. IBs who bring investors to a PAMM or MAM strategy get nothing from it.

Who asked:

What it costs today:

What good looks like: A broker ticks PAMM rebates on a Rebates program and maps strategies to it. When PAMM sends a mapped strategy's Performance Fee, the Incentive program works out the split by the referring IB's tier scheme and sends it back to the CRM instantly; an unmapped strategy's fee stays 100% with the fund manager. The IB sees Rebates and PAMM Rebates side by side in the IB portal.

Who is involved

Actor	Their part in this feature
Fund manager	Sets the strategy's Performance Fee in PAMM
Ops admin	Builds the PAMM fee scheme: a fee structure with Sub Type Investor Accounts
Broker admin	Ticks PAMM rebates on a Rebates program, maps strategies, adds schemes to tiers
IB, Master IB	Earn Rebates and PAMM rebates in the same program; follow them in the IB portal
Investor	Subscribes to a strategy through their virtual account
PAMM / MAM	Sends the Performance Fee and virtual account trades to the CRM
Incentive program	Identifies the mapping, works out the split and rebate, and sends them back to the CRM instantly
CRM	Receives the Performance Fee from PAMM; with PAMM, pays out what the Incentive program sends back
Broker	Takes the IB hierarchy share when an investor has no referring IB

User stories

US1 - Map strategies to a Rebates program (Must)

As a broker admin, I want to tick PAMM rebates on a Rebates program and map strategies to it, so that their Performance Fee is shared with IBs.

Independent test: Map Alpha Growth PAMM and Steady Income MAM to a program; it saves.

Acceptance scenarios:

1. Given Program Type Rebates, when the admin ticks PAMM rebates, then Map strategies appears.
2. Given a strategy already mapped to another active Rebates program, when the admin maps it, then it is blocked and the other program is named.

US2 - Build a PAMM fee scheme (Must)

As an ops admin, I want an Investor Accounts fee scheme that splits the Performance Fee pool between the fund manager, the IB hierarchy and named people, so that one scheme serves every mapped strategy at a tier.

Independent test: E4.

Acceptance scenarios:

1. Given Fund Manager 50%, IB hierarchy 37.5% and individual 0%, when the admin looks at the allocation, then it shows "12.5% unallocated" and Next is disabled.
2. Given a matrix row that totals 80%, when the admin looks at the tab, then it shows that the row is not 100%.

US3 - Put PAMM schemes on tiers (Must)

As a broker admin, I want to add an Investor Accounts scheme to each tier next to its trading schemes, so that one program pays both Rebates and PAMM rebates.

Independent test: A tier with Standard Tiered Structure (Trading) and PAMM PF - Gold (Investor) saves.

Acceptance scenarios:

1. Given PAMM rebates is ticked, when a tier has no Investor Accounts scheme, then the program cannot be published.

US4 - Get a share of the Performance Fee (Must)

As an IB, I want my tier's share of the Performance Fee from investors I referred into mapped strategies, so that I earn from managed accounts too.

Independent test: E1 and E5.

Acceptance scenarios:

1. Given the Examples setup, when PAMM sends the fee, then the IB hierarchy share of $2,000 is split by the referring IB's matrix row (E5).
2. Given a strategy that is not mapped, when its Performance Fee arrives, then the fund manager keeps all of it (E2).

US5 - Follow Rebates and PAMM rebates separately (Must)

As an IB, I want to see trading rebates and PAMM rebates side by side, so that I can track each.

Independent test: Open Rebate Programs in the IB portal for an IB earning both.

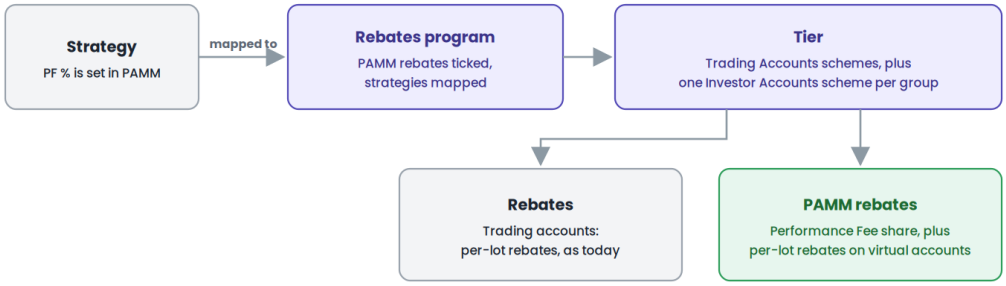

Acceptance scenarios:

1. Given an IB earning both, when they open Rebate Programs, then Total Earnings shows Rebates and PAMM Rebates, with PAMM split into Performance Fee share and virtual volume rebates.
2. Given payout history, when the IB filters by PAMM Rebates, then only PAMM · Perf. Fee and PAMM · Volume lines show, each with its basis.

User journey

Setup: one program, two kinds of rebate

Strategies are mapped to a Rebates program; each tier holds trading schemes and one Investor Accounts scheme per group

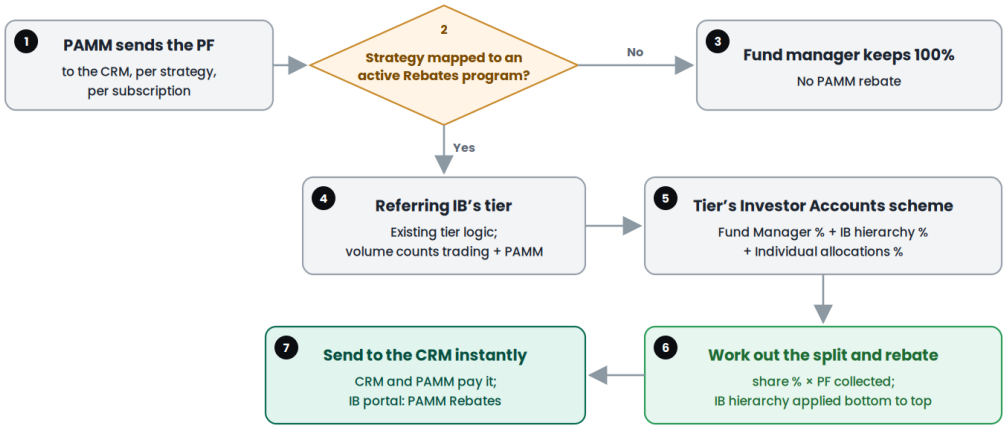

Same program, same IB: both are paid, each by its own scheme. Tier volume counts trading and PAMM lots together.

PAMM rebates enrol through the strategy mapping only; the program's enrollment criteria do not apply to them.

1. [UI] Ops admin creates an Investor Accounts fee scheme: IB Rebate Split, Performance Fee Sharing and Individual Rebate Configuration (S3).
2. [UI] Broker admin creates a Rebates program, ticks PAMM rebates and maps strategies (S1).
3. [UI] Broker admin adds trading schemes and one Investor Accounts scheme per group to each tier (S2), then publishes.

When PAMM sends a fee: one check decides the split

Numbers match the steps below

Steps 2-6 are the Incentive program. It only identifies the mapping and works out the amounts; it does not settle or pay.

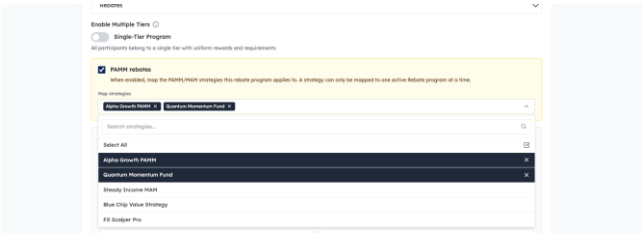

1. [Backend] PAMM sends the Performance Fee to the CRM, per strategy, per subscription.
2. [Backend] The Incentive program checks whether the strategy is mapped to an active Rebates program.
3. [Backend] Not mapped: the fund manager keeps 100%; no PAMM rebate.
4. [Backend] Mapped: the referring IB's tier, from existing tier logic.
5. [Backend] That tier's Investor Accounts scheme.
6. [Backend] It works out the split and rebate; the IB hierarchy share is applied bottom to top.
7. [Backend] It sends them back to the CRM instantly; CRM and PAMM pay them, and the IB sees them under PAMM Rebates (S4).

Screens

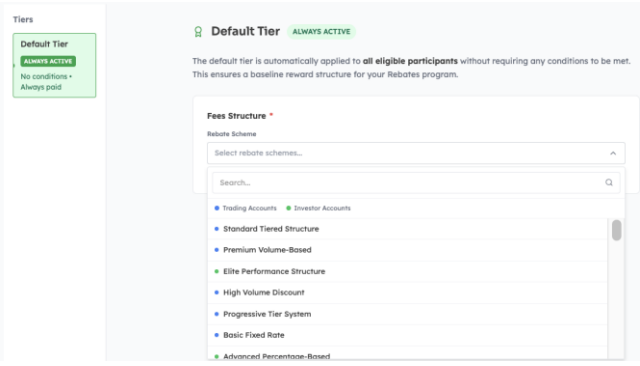

ID	Screen	Figma frame link	Purpose	States to design
S1	Incentive Program: Program Basics (Rebates)	SharePoint	PAMM rebates tick and Map strategies	Unticked, ticked with strategies, strategy blocked
S2	Incentive Program: Tiers & Rewards	SharePoint	Rebate Scheme per tier: Trading and Investor Accounts schemes	Empty, both types, no Investor Accounts scheme
S3	Create Rebate Fee Structure: Investor Accounts	SharePoint	Basic Details, then three tabs: IB Rebate Split, Performance Fee Sharing, Individual Rebate Configuration	Unallocated, over-allocated, reconciled, row not 100%
S4	IB portal: Rebate Programs	SharePoint	Rebates and PAMM Rebates: earnings, milestones, rates, payout history	Rebates only, Rebates and PAMM

Screenshots: S1-S3 from fynxtcloudip.fynxt.com; S4 from the design.

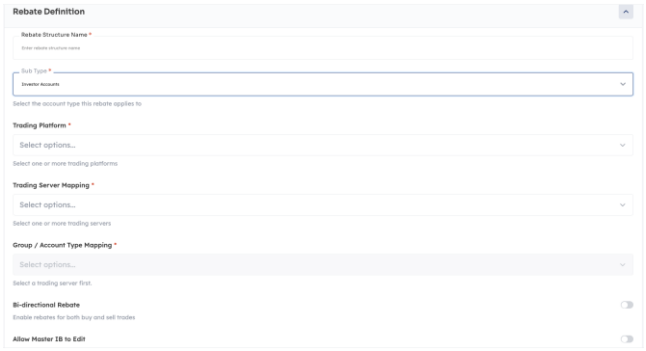

S1 PAMM rebates ticked, Map strategies

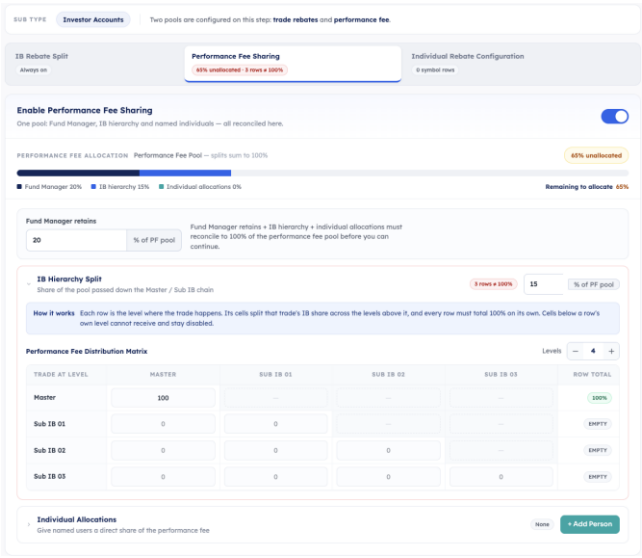

S2 Tier Rebate Scheme: Trading and Investor Accounts

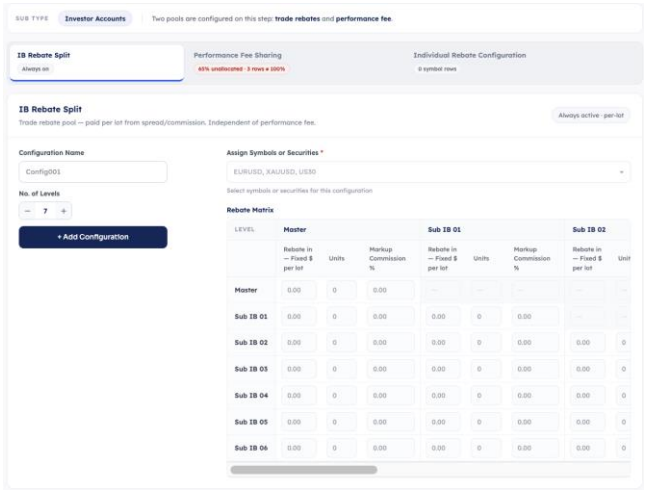

S3 Basic Details: Sub Type Investor Accounts

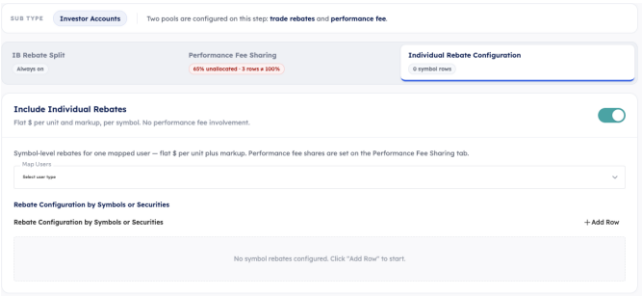

S3 Performance Fee Sharing: pool and distribution matrix

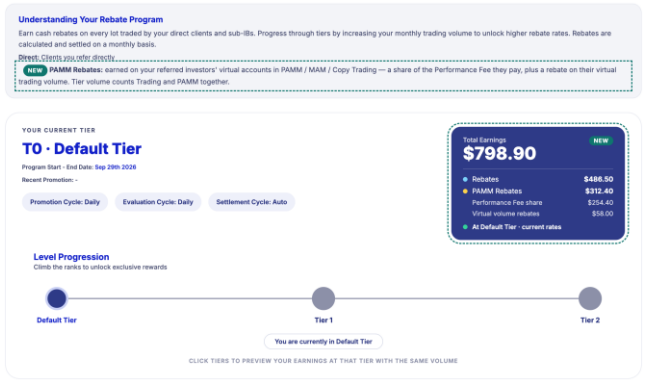

S3 IB Rebate Split: per-lot rebates on virtual accounts

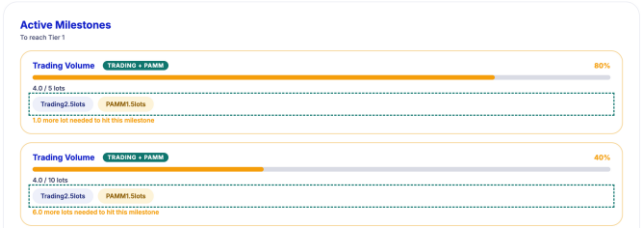

S3 Individual Rebate Configuration

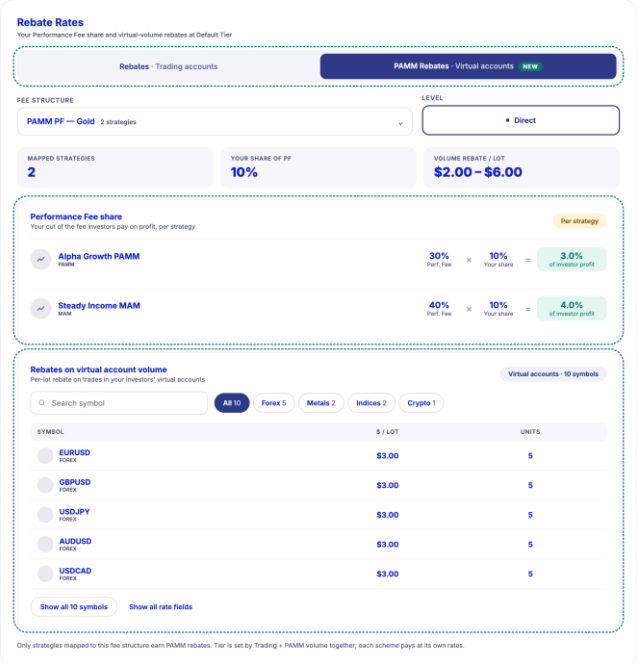

S4 Total Earnings: Rebates and PAMM Rebates

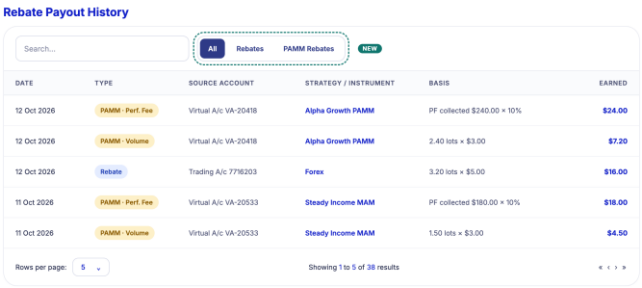

S4 Milestones count Trading + PAMM lots

S4 Rebate Rates: PAMM Rebates tab

S4 Payout history: All, Rebates, PAMM Rebates

Rules

Front end

U1. Program Type Rebates shows a PAMM rebates tick in Program Basics, off by default.
U2. Ticking it shows Map strategies: search, pick one or more, or Select All. A strategy already mapped to another active Rebates program is blocked, and that program is named.
U3. Each tier's Rebate Scheme lists Trading Accounts and Investor Accounts schemes, marked by type. A tier can hold both.
U4. Fee structure Basic Details: Sub Type is Trading Accounts or Investor Accounts. Investor Accounts is the PAMM fee scheme.
U5. Investor Accounts Rebate Configuration has three tabs: IB Rebate Split (always on), Performance Fee Sharing (on or off) and Individual Rebate Configuration (on or off). A banner says two pools are set here: trade rebates and performance fee.
U6. Performance Fee Sharing shows an allocation bar (Fund Manager, IB hierarchy, individual allocations, remaining) and "X% unallocated" or "X% over-allocated". Next stays disabled until the three total 100%.
U7. Distribution matrix: a Levels stepper, one row per level, cells below a row's own level disabled, each row's total shown, and a How it works note.
U8. Individual allocations: + Add Person gives a named user a direct share of the Performance Fee.
U9. Save as Draft is available on every step.
U10. IB portal, Rebate Programs: Total Earnings shows Rebates and PAMM Rebates separately; PAMM Rebates shows Performance Fee share and virtual volume rebates.
U11. Volume milestones show trading and PAMM lots separately and are labelled Trading + PAMM.
U12. Rebate Rates has two tabs, Rebates · Trading accounts and PAMM Rebates · Virtual accounts. The PAMM tab shows the fee structure, level, mapped strategies, the IB's share of the Performance Fee, the volume rebate per lot, each strategy's Performance Fee % × the IB's share as a % of investor profit, and per-lot rebates by symbol.
U13. Payout history filters All, Rebates and PAMM Rebates. PAMM lines are PAMM · Perf. Fee or PAMM · Volume, with source account, strategy and basis.

Back end

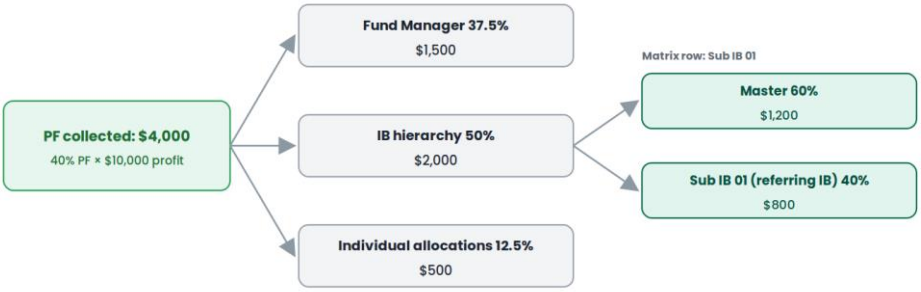

B1. PAMM sends the CRM the Performance Fee, per strategy and per subscription, and the virtual account trades.
B2. PAMM rebates do not use the program's enrollment criteria. Enrollment for PAMM rebates comes only from the strategy-to-program mapping.
B3. Strategy not mapped to an active Rebates program: the fund manager keeps 100%. No PAMM rebate.
B4. Strategy mapped: use the referring IB's tier in that program, from existing tier logic.
B5. Tier volume counts trading and PAMM (virtual account) lots together.
B6. One program can pay both: Rebates by its Trading Accounts schemes and PAMM rebates by its Investor Accounts scheme, each at its own rates.
B7. One group, one Investor Accounts scheme per tier, used for every mapped strategy in the program at that tier.
B8. With PAMM rebates ticked, every tier needs an Investor Accounts scheme before publishing.
B9. Fund Manager % + IB hierarchy % + individual allocations % = 100% of the Performance Fee pool. The pool is not the strategy's Performance Fee %; the amount arrives at settlement.
B10. Distribution matrix: each row is the referring IB's level; its cells split the IB hierarchy share across that level and the levels above; each row totals 100%.

B11. Share = share % × PF collected. A level's share = IB hierarchy % × level % × PF collected.
B12. A strategy can be mapped to only one active Rebates program at a time. A program can map many strategies.
B13. The distribution matrix is applied bottom to top, starting from the referring IB, so the whole IB hierarchy share is always paid.
B14. Mapping covers every IB below a Master IB, including Sub-IBs added later.
B15. IB Rebate Split: per-lot rebate on investors' virtual account trades, from spread or commission, independent of the Performance Fee. Per row, sub-levels total no more than Master; Master is above 0 on at least one row.
B16. Individual rebates: flat $ per unit plus markup, per symbol, for mapped users. No Performance Fee involvement.
B17. The Incentive program only identifies the mapping and works out the split and rebate (Performance Fee share and virtual volume rebates). It sends them back to the CRM instantly; CRM and PAMM pay them. The program's Settlement Period does not apply to PAMM rebates.
B18. Investor with no referring IB: the broker takes the IB hierarchy share.
B19. Every blocked save is logged with the rule and the values.

Examples

Setup: Gold tier scheme Fund Manager 37.5% / IB hierarchy 50% / individual 12.5%. Strategy PF 40%. Investor profit $10,000, so PF collected $4,000.

E1 and E5 in a picture

Gold tier scheme 37.5 / 50 / 12.5 · the referring IB is Sub IB 01, whose matrix row is Master 60%, Sub IB 01 40%

#	Rule	Input	Expected result
E1	B11	Investor of a Gold-tier IB	Fund Manager $1,500, IB hierarchy $2,000, individual $500
E2	B3	Strategy not mapped to any program	Fund manager $4,000 (100%)
E3	B7	Second strategy in the same program at 25% PF; same $10,000 profit (PF $2,500)	Same scheme: $937.50, $1,250, $312.50
E4	B9, U6	Fund Manager 50%, IB hierarchy 37.5%, individual 0%	"12.5% unallocated"; Next disabled
E5	B10, B11	Referring IB is Sub IB 01; that row: Master 60%, Sub IB 01 40%. IB hierarchy share $2,000	Master $1,200, Sub IB 01 $800
E6	B18	Investor with no referring IB; Examples setup	Broker $2,000; Fund Manager $1,500; individual $500
E7	U12	Alpha Growth PAMM PF 30%; IB's share 10%	Shown as 3.0% of investor profit
E8	B11, U13	PF collected $240; IB's share 10%	Payout line PAMM · Perf. Fee, $24.00
E9	B15, U13	2.40 lots on a virtual account at $3.00 per lot	Payout line PAMM · Volume, $7.20
E10	B5, U11	Trading 2.5 lots and PAMM 1.5 lots toward a 5-lot milestone	4.0 / 5 lots

Edge cases and errors

Case	Side	Expected result
Allocation totals exactly 100.00%	UI	Next enabled
Allocation totals 99.99%	UI	"0.01% unallocated"; Next disabled
Strategy PF is 0%	Backend	Nothing to split; every share is $0
Investor has no referring IB	Backend	The broker takes the IB hierarchy share (B18)
Strategy already in another active Rebates program	UI	Blocked; the other program is named (B12)
PAMM rebates ticked, a tier has no Investor Accounts scheme	UI	The program cannot be published (B8)

What must not change

- Tier evaluation, promotion and demotion work as today; only their volume now includes PAMM lots (B5).
- Trading Accounts fee schemes and the rebates they pay.
- The Performance Fee is set on the strategy in PAMM.
- Currency conversion, rounding, and how individual allocations are paid work as for today's rebates.

Out of scope

- Setting the Performance Fee on a strategy (PAMM).
- Mapping one strategy to more than one active Rebates program.
- Branch exclusion and per-IB scheme overrides.

Data and interfaces

Field	Screen	Direction	Type	Required	Allowed values and rules	Example
PAMM rebates	S1	In	Yes/No	Yes	Default No; Rebates programs only	Yes
Mapped strategies	S1	In	List	When PAMM rebates	One active Rebates program each (B12)	Alpha Growth PAMM
Rebate Scheme per tier	S2	In	List	Yes	Trading and Investor Accounts schemes; one Investor Accounts scheme per group (B7, B8)	PAMM PF - Gold
Sub Type	S3	In	List	Yes	Trading Accounts, Investor Accounts	Investor Accounts
Fund Manager retains	S3	In	Number	Yes	% of PF pool; three buckets total 100 (B9)	37.5
IB hierarchy	S3	In	Number	Yes	% of PF pool (B9)	50
Individual allocations	S3	In	Number	Yes	% of PF pool (B9)	12.5
Matrix cell	S3	In	Number	When IB hierarchy > 0	Each row totals 100 (B10)	60 / 40
Performance Fee	—	In (PAMM)	Number	Yes	Per strategy, per subscription	$4,000
Virtual account trades	—	In (PAMM)	Number	Yes	Lots per symbol	2.40 lots EURUSD
Earnings	S4	Out	Number		Rebates; PAMM Rebates (Performance Fee share, virtual volume rebates)	$312.40
Payout line type	S4	Out	List		Rebate, PAMM · Perf. Fee, PAMM · Volume	PAMM · Perf. Fee
Split and rebate	—	Out (to CRM)	Number	Yes	Per recipient; sent back instantly (B17)	Master $1,200

Non-functional

Area	Requirement
Permissions	Broker admin: programs and mapping. Ops admin: fee schemes. Fund manager: own strategies. Broker admin and compliance: full audit.
Speed	
Audit	Scheme changes, tier-to-scheme changes, strategy mapping changes, payouts and blocked saves. Immutable; kept 7 years; export as CSV or PDF.

Glossary

Term	Meaning
PAMM rebates	A share of a mapped strategy's Performance Fee, plus per-lot rebates on investors' virtual accounts
Investor Accounts scheme	A fee structure with Sub Type Investor Accounts: the PAMM fee scheme. Shown on tiers as Investor (Managed)
PF pool	The Performance Fee collected for a subscription, split 100% between Fund Manager, IB hierarchy and individual allocations
PF collected	The Performance Fee PAMM sends to the CRM for a subscription
IB hierarchy	The referring IB and the IBs above them, paid by level, bottom to top
Individual allocations	Named users with a direct share of the Performance Fee
Virtual account	An investor's account inside a strategy
